

Here are some assumptions that went into calculating your carbon footprint

Electricity:

- Electric bill - 11,698 kwh/year = average energy consumption / household¹
- the average is 13.27 cents per kilowatt hour (kwh),² 0.62 kilogramCO₂ / kwh³
- 11,698 kwh/year * 0.62 kgCO₂/kwh = 7,252.76 kg CO₂/year

Flights per year:

- Flights per year - average is 2.1 trips per Person (if fly).⁴
- Assume 0.1304 kgCO₂/km⁵ for medium-term flights (DEFRA model).
- Domestic flights ~2.5-3 hr, 2200km * 0.1304 kgCO₂/km * 2.1 trips = 602.448 kg CO₂/yr

Transportation:

- Average Person drives around 15,000 per year (assume this is all forms of ground transport)⁶
- Fuel efficiency on car - assume 30 mpg on road car now⁷
- 0.960 pounds = 0.435 kg CO₂ per mile (driving) * 15,000 miles/year = 6,525.0 kg CO₂ / year ⁸
- 0.657 pounds = 0.298 kg of CO₂ per mile - 50% public transport, 50% single auto * 15,000 miles/year = 4470.0 kg CO₂ /year
- 0.354 pounds = 0.161 kg of CO₂ per mile (public transportation) * 15,000 miles / year = 2,415.0 kg CO₂ / year

Uber trips:

- (14 uber million trips / day * 0.50)⁹ / 325 million people * 365 days / year = 7.86 rides/person
- Average ride length = 6 miles/trip * 7.86 trips / person / year * 0.960 kgCo₂/mile = 45.27 kg Co₂/uber rider/year.¹⁰

Food choices / nutrition:¹¹

- 1.7 tons = 1,542.21406 kilograms of CO₂/year - vegetarian. • 2.5 tons = 2,267.96185 kilograms of CO₂/year - average.
- 3.3 tons = 2,993.70964 kilograms of CO₂/year - meat lover.

Amazon supply chain:

- 0.1289 kg CO₂e per Rs. 75
- 8,700,000 boxes/day¹³ * 365 days/year / 1,400,000,000 People = 2.26 boxes/People.
- 2.26 boxes/year * Rs. 3500 / box = ~Rs. 7910/year * 0.1289 kg / Rs. 75= 29.13 kg CO₂/year.
